

BUSINESS RECOMMENDATIONS REPORT

E-Commerce Purchase Prediction

1. Executive Summary

Based on the analysis of 25,000 customer sessions and an optimized Random Forest Classifier achieving **99.72% accuracy** in predicting customer purchases, this report presents five key business recommendations. These recommendations are derived from the machine learning model and aim to improve conversion rates, optimize marketing expenditure, and enhance the overall customer experience.

Key Finding: Customer reviews, specifically review helpfulness and product ratings, are the strongest predictors of purchase behavior, accounting for **91.95%** of the model's predictive importance.

2. Recommendation 1: Implement a Review Collection and Highlighting System

Model Finding

Review Helpful Votes is the most influential feature in predicting customer purchases, contributing **72.17%** of the total feature importance. Customers who find reviews helpful are significantly more likely to complete a purchase.

Business Interpretation

Customer reviews build trust and reduce uncertainty during the buying process. Helpful reviews increase customer confidence and positively influence purchasing decisions.

Recommended Actions

- Send automated review request emails approximately seven days after product delivery.
- Encourage customers to provide both ratings and detailed written reviews.
- Include a direct product review link within follow-up emails.
- Offer loyalty points or rewards for submitting reviews.
- Conduct monthly prize draws for active reviewers.
- Display the most helpful reviews at the top of product pages.
- Highlight verified purchase badges.
- Allow customers to vote on review helpfulness.

- Display average ratings and total review counts prominently.

Expected Business Benefits

- 15–25% increase in conversion rate.
- Higher customer trust and confidence.
- Improved search engine optimization through user-generated content.
- Valuable customer feedback for continuous product improvement.

Risks and Limitations

- Reviews require time to accumulate.
 - Negative reviews may influence purchasing decisions.
 - Review moderation is necessary to prevent fake or misleading reviews.
 - Additional investment may be required for review management tools.
-

3. Recommendation 2: Segment Marketing Based on Purchase Probability

Model Finding

Customers can be divided into three purchase probability groups:

High Likelihood: 22% of customers

Medium Likelihood: 0.2% of customers

Low Likelihood: 77.7% of customers

Business Interpretation

Different customer segments require different marketing strategies. Applying identical campaigns to every customer results in inefficient marketing expenditure.

Recommended Actions

For High Likelihood Customers:

- Send promotional offers and discounts.
- Implement abandoned cart reminders.
- Recommend complementary products.
- Prioritize these customers in remarketing campaigns.
- Encourage loyalty program enrollment.

For Medium Likelihood Customers:

- Display customer reviews and product comparisons.
- Offer free shipping or small discounts.
- Send personalized educational emails.
- Highlight return policies and product guarantees.

For Low Likelihood Customers:

- Avoid expensive promotional campaigns.
- Focus on brand awareness.
- Improve website usability.
- Collect customer feedback.
- Retarget only after stronger engagement signals are observed.

Expected Business Benefits

- 30–40% reduction in unnecessary marketing expenditure.
- Higher marketing return on investment.
- Improved customer experience through personalized communication.
- Better allocation of marketing resources.

Risks and Limitations

- Requires marketing automation software.
 - Customer segmentation must be updated regularly.
 - Predictive models require periodic retraining.
 - Marketing strategies should be validated using A/B testing.
-

4. Recommendation 3: Optimize Product Pages for Reviews and Ratings

Model Finding

Product Rating is the second most influential feature, contributing **19.78%** of the model's predictive importance.

Business Interpretation

Customers trust highly rated products. Product ratings are often the first information customers evaluate before making purchasing decisions.

Recommended Actions

- Display average ratings prominently above product descriptions.

- Show star ratings on product listings.
- Highlight verified customer reviews.
- Display the most helpful reviews first.
- Encourage customers to upload product photos.
- Add social proof such as:
 - Customers who bought this also bought
 - Top positive review
 - Top critical review
 - Number of recent purchases

Expected Business Benefits

- 10–20% increase in conversion rate.
- Higher customer satisfaction.
- Reduced product return rates.
- Improved product discovery.

Risks and Limitations

- Requires high-quality product images.
 - Negative reviews must be managed professionally.
 - Product pages may require redesign.
 - Higher ratings may increase customer expectations.
-

5. Recommendation 4: Encourage User Registration

Model Finding

Registered customers have a **38% higher purchase rate** than guest users.

Business Interpretation

Registered users are generally more engaged and provide opportunities for personalized marketing and long-term customer relationship management.

Recommended Actions

- Offer discounts on first purchases.
- Provide free shipping for new registrations.
- Reward customers with loyalty points.
- Simplify the registration process.

- Allow social login using Google or Facebook.
- Offer guest checkout with optional registration.
- Personalize product recommendations.
- Send welcome emails and abandoned cart reminders.

Expected Business Benefits

- 20–30% increase in repeat purchases.
- Better customer data for personalization.
- Higher Customer Lifetime Value (CLV).
- Improved email marketing performance.

Risks and Limitations

- Registration requirements may discourage some customers.
 - Compliance with privacy regulations is necessary.
 - Additional investment is required for email marketing systems.
-

6. Recommendation 5: Optimize Discount Strategy

Model Finding

Discount Amount contributes **0.61%** to purchase prediction, indicating that strategic discounts positively influence price-sensitive customers.

Business Interpretation

Well-targeted discounts encourage purchases without unnecessarily reducing profit margins.

Recommended Actions

- Provide discounts to medium-likelihood customers.
- Apply dynamic pricing strategies.
- Test multiple discount levels.
- Offer percentage discounts, fixed discounts, free shipping, and bundle offers.
- Trigger discounts after browsing sessions or abandoned carts.
- Monitor conversion rates and profitability continuously.

Expected Business Benefits

- 10–15% increase in conversions among price-sensitive customers.
- Higher average order values.

- Improved inventory turnover.
- Better customer acquisition.

Risks and Limitations

- Excessive discounts reduce profit margins.
- Customers may delay purchases expecting discounts.
- Brand perception should be maintained.

7. Summary of Recommendations

Priority	Recommendation	Expected Impact	Implementation Time	Risk Level
1	Review Collection & Highlighting	15–25% Conversion Increase	1–3 Months	Low
2	Segment Marketing by Purchase Probability	30–40% Reduction in Marketing Waste	2–4 Months	Medium
3	Product Page Optimization	10–20% Conversion Increase	1–2 Months	Low
4	Encourage User Registration	20–30% Increase in Repeat Purchases	2–3 Months	Low
5	Optimize Discount Strategy	10–15% Conversion Increase	1–2 Months	Medium

8. Implementation Roadmap

Immediate Actions (Next 30 Days)

- Implement a review collection system.
- Send automated review requests.
- Display reviews prominently.
- Create customer purchase segments.
- Launch personalized email campaigns.
- Improve product pages.
- Enhance website navigation.

Medium-Term Actions (3–6 Months)

- Develop a customer loyalty program.
- Perform A/B testing for discounts and product pages.
- Build a recommendation engine.

- Create customer journey maps.
- Implement real-time purchase probability scoring.

Long-Term Actions (6–12 Months)

- Develop Customer Lifetime Value (CLV) prediction models.
 - Implement automated marketing orchestration.
 - Build a unified customer data platform.
 - Develop customer churn prediction models.
 - Personalize website experiences across customer segments.
-

9. Key Takeaways

- Customer reviews are the strongest driver of purchase decisions.
 - Segment-based marketing significantly improves marketing efficiency.
 - Product ratings increase customer trust and purchase confidence.
 - Registered customers generate higher long-term value.
 - Strategic discounts should be targeted rather than applied universally.
-

10. Conclusion

The machine learning model demonstrates that customer reviews and ratings have the greatest influence on purchasing decisions. Businesses should prioritize building a strong review management system while simultaneously implementing customer segmentation, personalized marketing, optimized product pages, user registration incentives, and strategic discount campaigns.

Among all recommendations, implementing a review collection and highlighting system should be considered the highest priority because it offers the greatest potential business impact with relatively low implementation risk.

11. Methodology

Model: Optimized Random Forest Classifier

Dataset: 25,000 E-Commerce Customer Sessions

Features: 29 Total (13 Numerical, 16 Categorical)

Validation Method: 3-Fold Cross-Validation

Model Accuracy: 99.72%

F1-Score: 99.37%

Report Generated: December 2024

Data Source: E-Commerce Customer Behavior Dataset

Model Version: Random Forest Classifier v1.0
